DESALTER KIT, SEA WATER, MARK-2
VAN BRODE MILLING CO., INC.
Part No. VR 101

cord of tape for mending the bag. Each package of chemical when mixed with sea water in the plastic bag makes about 1 pint of drinking water. The mixture of sea water and chemical appears muddy. Filter at bottom of the bag holds back all sediment. Only pure water can come out through the filter. A small amount of salt is left in the drinking water intentionally. Take out bag and tie it to the raft. Read directions on bag and package of chemical and follow them exactly. Do not drink any water the first day. Water drunk the first day will be wasted in urine.

NEVER DRINK SEA WATER!

READ THIS

Do not open kit until it is in a cool, temperate, plastic a little when it is absolutely cold.

Remove bags and strips, and open can. Shake out contents and tie to raft. Check over instruction booklet.
